

# CURE CANCER

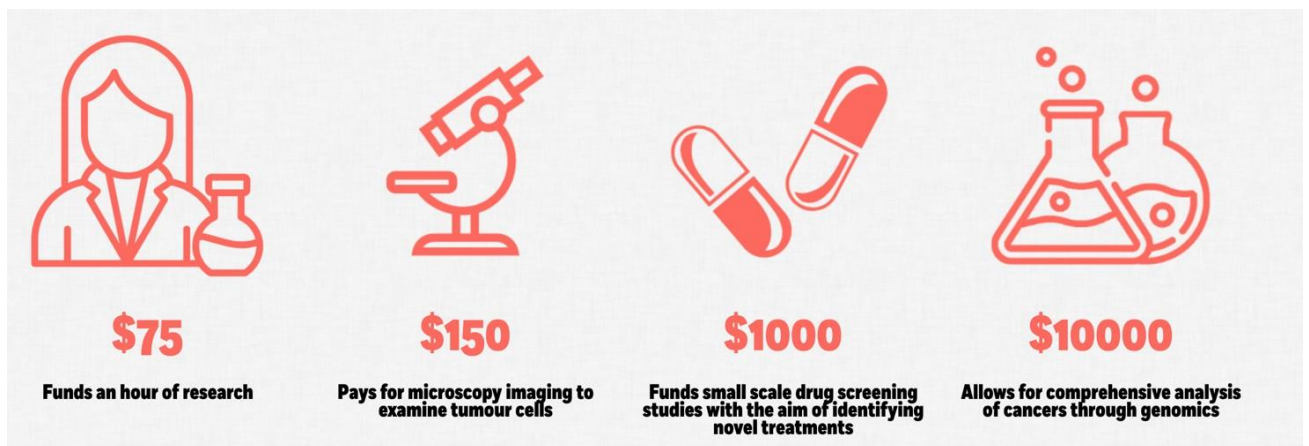

Cancer kills almost 10 million men, women and children worldwide every year and impacts countless more. The only way we can change that is through research.

For the past 55 years, Cure Cancer has been dedicated to funding cutting edge research across all cancer types, giving talented young scientists the opportunity to make an impact with their innovative and ground-breaking ideas.

We exclusively fund emerging researchers, creating a pipeline of future research success. Our seed funding has kick-started over 540 cancer researcher careers and led to numerous global breakthroughs in brain cancer, breast cancer, immunotherapy, pancreatic cancer, childhood leukaemia and more. Without our funding, these discoveries may never have been made.

Your donation is making a difference. By investing in research today, you are safeguarding the generations of tomorrow.

**Mission:** Cure Cancer's mission is to make this the last generation to die from cancer.

**Cancer Statistics:** Close to 10 million people die from cancer worldwide every year and 1 Australian dies every 12 minutes from cancer. We can change this, but only through research.

**All Cancer Types:** Cancer doesn't discriminate, and neither do we, which is why Cure Cancer funds crucial research across all cancer types.

**Early Career Researchers:** Cure Cancer is the only Australian charity that exclusively funds young researchers at the start of their careers when few other funding bodies will take the chance. Less than 6% of early-career research grant applications currently receive funding. We identify, assess and fund the research we believe has the best possible chance of finding a cure.

**Importance of Funding:** Without this funding, many of our grant recipients would have never had the opportunity to make research breakthroughs that have changed countless lives.

**Fundraising History:** Over the past 55 years, Cure Cancer has raised \$83.1m to support lifesaving research across all cancer types.

To date, we have provided over 540 research grants to young researchers with ground-breaking, innovative ideas, many who have gone on to become leaders in cancer research globally.

**Diversity of Researchers:** Cure Cancer's researchers are an international consortium of bright young scientists from around the globe who are dedicated to making this the last generation to die from cancer.

They have chosen to carry out their ground-breaking work at our globally renowned Australian research institutes.

**Importance of Research:** Because of research, the five-year cancer survival rate has increased from 48% to 68% in the last 30 years across all cancers, but there is still more work to be done.
